

Mustang expands track range

After the successful introduction of the RT Series track loaders, Mustang has extended the range with the arrival of the 2500RT track loader.

The Mustang RT Series track loaders feature legendary Mustang grunt and strength in a machine that works where others find it difficult.

The 1750RT, 2100RT and 2500RT track loaders are built with the operator in mind. The operators cab is designed to be state of the art, where visibility and comfort were paramount in the design process.

It features an air ride suspension seat with the controls mounted to the seat so they move with the operator. This important feature means the operator doesn't need to use their wrists to brace in order to control the machine precisely when working over rough ground.

“ With that high level of comfort and operability also comes practicality — a tilt-out foot pod makes it easy for operators to clean-out the cab. ”

With that high level of comfort and operability also comes practicality — a tilt-out foot pod makes it easy for operators to clean-out the cab.

The machines also feature an industry exclusive HydraTrac automatic track tensioning system. The HydraTrac system eliminates the need for manually tensioning the tracks on the loader before operation. This not only saves valuable time, but it also increases the life of the tracks and rollers by always ensuring correct tension. The welded, dedicated track system enhances grading and tractive effort. ■
