SWE35UF

The SWE35UF weighs in at 3.75T and easily loads a 6-wheeler, starting from **\$48,000+GST** packs a lot of punch for the bucks

MANITOU

HANDLING YOUR WORLD

4 NEW MODELS

Coming Soon

2100VT / 2300VT

The new Manitou 2100VT and 2300VT are hitting NZ shores early 2024. As well as looking fantastic these machines also feature a 12% increase in breakout force, and a vertical lift pattern making loading trucks easy with high lift heights and long reach. They are also the largest, quietest, most comfortable cabins that Manitou has designed

into a track loader yet, so they will be very popular with operators. Like all Manitou track loaders they feature the IdealTrax automatic track tensioning system, meaning operators no longer have the hassle or concern of correct track tensioning, and with the correct tension the machines get fantastic track and roller life.

1340R / 1640R

Manitou has released the 1340R and 1640R skid steer loaders. Identical to the 1350R and 1650R built in the USA these new models are built in their new Asian manufacturing hub, which reduces the cost of production and also the cost of shipping to New Zealand significantly. We have these models on introductory special for **\$49,990+GST** and **\$59,990+GST** with a standard bucket and open cabin, complete with a two year/2000 hour warranty with Connect subscription.
